(54) Title: **BIOLOGICAL APPARATUS**

(57) Abstract: The present invention relates to an apparatus for processing biological materials, the apparatus comprising a plurality of stacked, rotatable platforms, each platform having a plurality of sample receiving areas located thereon, the apparatus having a first dispensing member mounted for dispensing reagent and/or a sample to a sample receiving area on a first stacked platform and a second dispensing member mounted for dispensing reagent and/or a sample to a sample receiving area on a second stacked platform, each platform being rotated to move sequential sample receiving areas thereon into orientation with the mounted dispensing member to receive reagent or sample or both reagent and sample therefrom. The present invention is particularly suited to processing biological material for cytogenetic analysis.
